

As a kid I didn't grow up with a large amount of technology. Most people don't believe me when I say this, but the schools I went to before hardly had us use PowerPoint. When I look at how far I have come after just this one year I am amazed. My digital portfolio has grown more than I ever imagined what it would. Check out my website to see my online portfolio and learn more about me.

Summary

Adam Frey came up with the idea of Wikispaces in 2005 when looking for a way to plan a ski trip and decided to make an easy to operate system that now has over 5 million users. This website is open to anyone with an internet connection and a keyboard. Wikispaces only requires you to sign up or log in before you can get started, creating your very own web site that anyone can alter with the click of a mouse. Unlike other website creation tools

Wikispaces offers a wide variety of fonts, colors, and backgrounds that will make your site unique to you, and the best part is that you don't have to buy a membership to use your site. Wikispaces is the easy to use web site that lets you make your own site.

Step by Step

- 1) Log in to wiki spaces and create an account

- 2) Pick a topic for your site. Your site topic can be about anything you want.
- 3) Make the pages that will keep all of the information on your site organized and easy to read.
- 4) Tell everyone all about your new site, so that they can check it out.

Cool Classroom Uses

You and your students can use Wikispaces in tons of ways here are just a few to get you started:

- After reading a book make a site and have different groups of students make different things or do different activities and put them up on the site.
- When you are starting a new topic put up a new page with some activities that students can do to help them understand the subject.
- Help students collaborate on a project.

These are just a few of the many things you can use Wikispaces for in a classroom setting
